Other Site Characteristics

Torbiera di sella, fra la Val di Cembra e la Val di Fiemme, le cui acque defluiscono pertanto da due versanti. La vegetazione è quella delle torbiere di transizione; una piccola zona della torbiera è occupata da un boschetto di betulle pubescenti.

4.2 Quality and importance

Torbiera di transizione con specie turficole rare in tutta la catena alpina. Si tratta di un biotopo di vitale importanza per la riproduzione di molte specie di anfibi e rettili. Presenza storica di invertebrati dell'allegato II indicatori di zone umide integre, in forte declino. Presenza di invertebrati dell'allegato II che indicano buona naturalità delle acque correnti.
