- **Group:** A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

3.3 Other important species of flora and fauna (optional)

Other Site Characteristics

Laghetto di tipo eutrofico presso Pergine (Valsugana), originato da sbarramento alluvionale, con una fascia di canneto sulle rive e vegetazione fanerogamica natante e sommersa al centro. Sono presenti habitat di

particolare interesse non compresi nell'all.I della direttiva 92/43/CEE, in particolare: Phragmition (canneti) (10%).

4.2 Quality and importance

L'interesse è dovuto al laghetto, con l'orlo di vegetazione elofitica e la vegetazione di idrofite natanti. Si tratta di un biotopo di vitale importanza per la riproduzione di molte specie di anfibi e rettili. Presenza di invertebrati dell'allegato II che indicano buona naturalità delle acque correnti.
