- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not

available.

- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Bacino di esarazione glaciale sul Dossone di Cembra, scavato nei porfidi, sui quali si è in seguito depositato materiale morenico; al suo centro si trova un laghetto residuo, sulle cui rive è sviluppato un vasto aggallato, formato in gran parte da sfagni. Si tratta di una tipica torbiera di transizione, con lembi di vegetazione delle torbiere alte (vasti tappeti di sfagno); nella zona esterna è sviluppata una fascia boscata con betulla pubescente e pino mugo.

4.2 Quality and importance

Classico e bellissimo esempio di torbiera di transizione con laghetto residuo, in ottimo stato di conservazione. Si tratta di un biotopo di vitale importanza per la riproduzione di molte specie di anfibi e rettili.
