- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

Other Site Characteristics

Il lago - costituito da due bacini collegati tra loro da un breve canale - occupa il fondo di un'ampia conca (substrato calcareo) che raccoglie gli ultimi influssi mitigatori verso nord del Lago di Garda. A ridosso del lato settentrionale del lago si trova un ambiente termofilo con prati aridi e siepi. Habitat 6210 prioritario (stupenda fioritura di orchidee) con copertura del 8,26% del Sito.

4.2 Quality and importance

Sito a notevole variabilità ambientale e di grande interesse floristico e vegetazionale, dato il degrado cui sono andati incontro in generale gli ambienti umidi situati in aree termofile. Apprezzabili soprattutto la ricca vegetazione acquatica (idrofite), la flora delle sponde e la presenza di prati aridi ricchi di orchidacee. Il sito è inoltre di rilevante importanza per la nidificazione, la sosta e/o lo svernamento di specie di uccelli protette o in forte regresso, e/o a distribuzione localizzata sulle Alpi.
